Name: Quan Nguyen (Zach), Ayden Smith, Steven Mai

Script:
_ Firstly, we introduce ourselves.
_ We are gonna go into detail about parser, we are going to explain what it is and what it means. We are going to show some examples as well.
_ Next, we are going to go into regular expressions and why they are needed, their purposes, etc.
_ Then, we are going to go over examples of regular expressions, and how they define regular language.
_ Then, we are going to write all the rules. First, we are going to write the union one. We are going to explain union because it is basically the foundation of how the other ones are defined.
_ During that explanation, we are going to explain how it works during the AST tree. Like left associativity,
